1. Introduction

1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1804A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Texas Instruments' interpretation and use of the CALS standards in transferring technical IGES data. Texas Instruments used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on two 3.5" disketts. The test was not to evaluate the CALS MIL-STD-1840A per agreement between the AFCTB and Texas Instruments.

2. Test Parameters

Test Plan: AFCTB 93-074

Date of Evaluation: 28 July 1993

Evaluator:
George Elwood
Air Force CALS Test Bed

Cadkey *Cadkey v5.02*

Standards

Tested:

MIL-D-28000A

3. 1840A Analysis

3.1 External Packaging

The two 3.5" diskettes arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a commercial overnight envelop. The exterior of the envelop was not marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The 3.5" diskettes were not enclosed in a barrier bag or barrier sheet material, as required by MIL-STD-1840A, para. 5.3.1.2. Enclosed in the envelop was a packing list showing all files recorded on the diskettes.

3.2 Transmission Envelope

The diskettes received by the AFCTB contained MIL-STD-1840A files. The files were not named per the standard conventions per agreement between the AFCTB and Texas Instruments.

3.2.1 Tape Formats

Not Evaluated.

3.2.2 Declaration and Header Fields

Not evaluated

4. IGES Analysis

Both diskettes contained one IGES file each. These files were evaluated using IDA's parser/verifier set for CALS Class II. This utility did not report any CALS Class II errors on either diskette. However, the second file had 17 IGES errors and one severe IGES error. The parser log can be found in Appendix A of this report. The required CALS information in the Start section was present.

The AFCTB has several tools for viewing IGES files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The file on the first diskette was converted using Ar-
obrText's *iges2draw* utility with no reported errors. The resulting file was read into Island Graphics' *IslandDraw*, displayed and printed without a reported error. Some minor problems were noted in text overflow. The file on the second diskette converted without a reported error. However, the resulting file was not usable by Island Graphics' *IslandDraw*. The file size was only 12K from an input size of 5.7M.

The files were read using AUTODESK's AutoCAD R12 with translator version 5.1. Both files converted and displayed like the provided hard copies. Some minor text overflow occurred in the first file.

The files were read into MES' *CheckMark*. Both files converted and displayed. File one displayed and printed like the provided copy. Some minor text overflow was noted in the area near the bottom right corner. File two initially displayed like the provided copy. When the file was enlarged, to fit the screen, the 3-D missile drawing was displayed. An attempt to print this screen display was not successful due to memory limitation in the laser printer.

The files were converted using Cadkey's *ig2c* utility. The resulting files were read into Cadkey's *Cadkey*, displayed and printed. File one had no problems except for some text overflow in the lower right corner. File two would not convert, and error messages were displayed on the screen

during the conversion processes. The reported error was an out of memory error on entity 315.

The files were read into Carberry's *CADLeaf* software. Both files converted and displayed without an error. The displayed images appeared to be the same as provided by Texas Instruments.

The files were read using IDA's *IGESView*. Both files were displayed on the screen and were printed. The resulting outputs were the same as provided by Texas Instruments.

The IGES files were converted using Intergraph's *I/CIGES* utility without a reported error. The resulting files were read into Intergraph's *I/EMS* and displayed. The image for file one was the same as the provided file. The image for file two consisted of random lines, nothing of value displayed. Some parts of the displayed image could be identified in the ITI's *IGESWorks* output.

The files were read using ITI's *IGESWorks* without a reported error. The files were displayed and printed. File one was printed the same as the hard copy provided by Texas Instruments except for some minor text overflow noted in the lower right corner. File two was displayed as a 3-D model. It appeared that a complete missile system was included in the file. See the hard copy.

Both files had no reported CALS Class II errors. File one was converted on all systems available in the AFCTB without a problem. The resulting images matched those provided by Texas Instruments. File two could only be read by four software applications. One system displayed additional information not displayed on the Texas Instrument provided copy. File two, because of basic IGES errors, does not meet the CALS MIL-D-28000A specification.

5. SGML Analysis

The 3.5" diskettes contained no Standard Generalized Markup Language (SGML) files.

6. Raster Analysis

The 3.5" diskettes contained no Raster files.

7. CGM Analysis

The 3.5" diskettes contained no Computer Graphics Metafile (CGM) files.

8. Conclusions and Recommendations

The two 3.5" diskettes provided by Texas Instruments were not evaluated for MIL-STD-1840A requirements per agreement between the AFCTB and TI.

The two 3.5" diskettes contained one IGES file each. File one meets the CALS MIL-D-28000A Class II sub set specification, and could be used by all systems available in the AFCTB.

File two had reported basic IGES errors. The file could only be read by two of the systems available in the AFCTB. It does not meet the CALS MIL-D-28000A Class II sub set specification.

Error Summary:

The following message was issued 52 time(s)

Entity has too few data points. Number of data points found was %d. Number of data points must be at least %d.

The following message was issued 4 time(s)
Entity's points are not directionally colinear. All vectors formed by consecutive points must be in the same direction.

The following message was issued 7 time(s)
Internal error %d approximating curve at DE: %d, TYPE: %d, FORM: %d

The following message was issued 1 time(s)
A new view volume has been generated for the view with:
XMIN (%lf), XMAX (%lf),
YMIN (%lf), YMAX (%lf),
ZMIN (%lf), ZMAX (%lf).

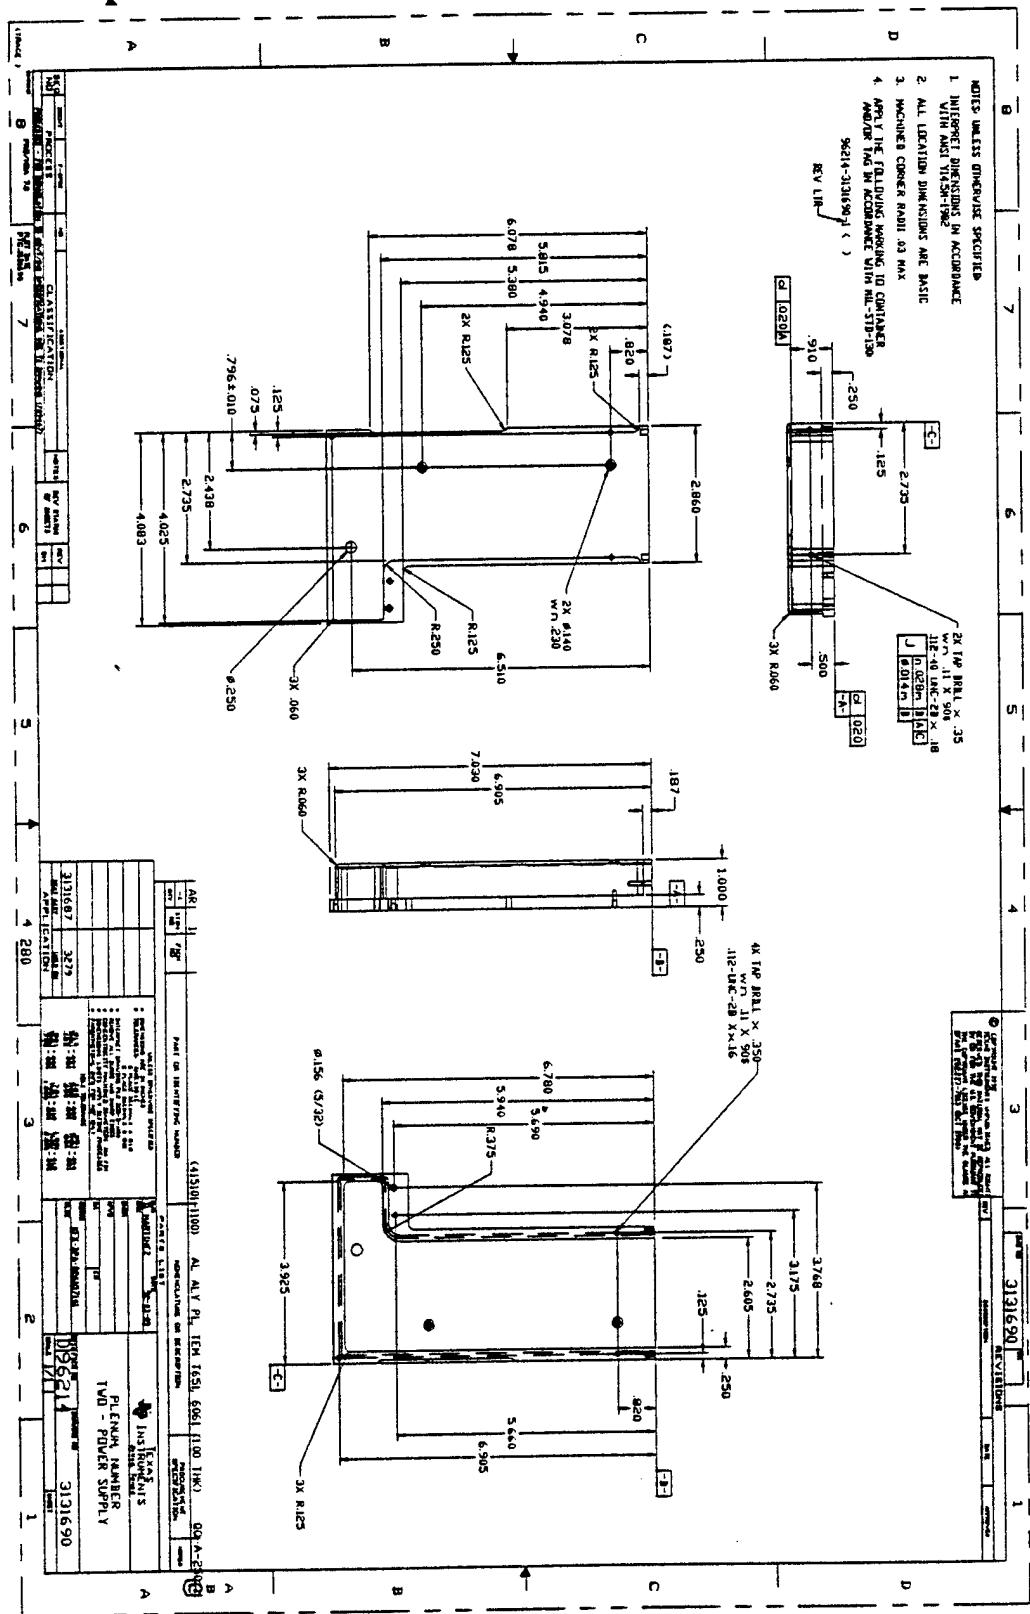

The following message was issued 19 time(s)
Error creating text style. Most likely could not open the shape file for a font. Text will be forced to STANDARD.
The style attempted was named: %s

CONFORMANCE: This IGES file conforms to the MIL-D-28000A Class II
subset (Engineering Drawings) dated December 19, 1990.

DOD-STD-100 and MIL-T-31000 part and drawing identification:

Revision letters:

Performing organization:

Date of the ASME Y14.26M file pre-processing:

Contract Number:

Intended drawing size letter:

Number of drawing sheets in the file:

Data organization method with contents of each level:

IGES/Works Version v1.4.0 Subset Generator

Entity Summary:

Type	Form	Description	Count
100	0	Circular Arc	2331
102	0	Composite Curve	8
104	1	Ellipse	114
106	12	Piecewise Linear Curve	3
110	0	Line	5830
116	0	Point	214
124	0	Transformation Matrix	332
126	0	Rational B-Spline Curve (General)	1450
128	0	Rational B-Spline Surface (General)	4
212	0	General Note (Simple)	205
230	0	Section Area (Standard Fill)	4
304	2	Line Font Definition (Pattern)	2
314	0	Color Definition	17
402	7	Group (Unordered, w/o back ptrs)	1
404	0	Drawing (form 0)	1
406	15	Property (Name)	1
406	16	Property (Drawing Size)	1
406	17	Property (Drawing Units)	1
Total			10519

Translation phase

Drawing Entity (404 Form 0) at DE 439, with
name = SHEET1,
size = 22.000000, 17.000000,
units = IN,
was processed in the AutoCAD drawing file: C:\TMP\TI002.dwg

IGES Entity Summary

Type	Form	Description	Count	Processed	Errors
100	0	Circular Arc	2331	2310	21

Error Summary:

The following message was issued 102 time(s)
Could not locate end of line delimiter, assuming card is 80 columns.

The following message was issued 103 time(s)

Line is not 80 columns long.

The following message was issued 103 time(s)

Section letter not found in column 73.

The following message was issued 103 time(s)

Could not locate section letter, assuming current section.

The following message was issued 1 time(s)

Number of PD lines found, does not match number expected.

The following message was issued 103 time(s)

Error decoding DE backpointer.

The following message was issued 1 time(s)

PD section line count in terminate section is incorrect.

The following message was issued 16 time(s)

DE has an invalid subordinance field. Value found was %d.

The following message was issued 505 time(s)

Entity has zero length. Start point: %.7e, %.7e. Terminate point: %.7e, %.7e.

The following message was issued 21 time(s)

Entity's radii are effectively zero. Start point radius: %.7e. Terminate point radius: %.7e.

The following message was issued 4 time(s)

Entity's End Point not on the conic. Value found was %.7e, %.7e.

The following message was issued 21 time(s)

Entity has zero length.

The following message was issued 307 time(s)

Entity has a column which is not a unit vector.

Status: 0
